1. Overview

There are three operating mode for WizFi360, as below.

- Station mode
- SoftAP mode
- Station + SoftAp mode

When WizFi360 as Station operating mode, WizFi360 connect and to another AP(Access Point) and communicate.

When it is as SoftAP operating mode, WizFi360 can communicates with devices and it assign the IP by DHCP.

When it is as Station+ SoftAP operating mode, this mode includes content of previous operating mode so it is Station mode operated and SoftAP operated at the same time.

Please refer to the figure below that modes.

There are two modes of data transparent those are AT command mode and data mode, the difference point sends the AT command whether or not.

WizFi360 AT command examples

WizFi360 operate as data mode, the AT command have sent as data via network.

If you change the AT command mode in data transparent mode, you should send the "+++" through Serial.

2. Default setting value of AT command

AT Command	Description
ATE1	Echo Enable
+CWMODE:2 <cr><lf></lf></cr>	SoftAP mode
+UART_DEF:115200,8,1,0,0 < CR > < LF >	Setting Uart
+CIPDNS_DEF:192.168.1.1 < CR > < LF >	Setting DNS address
+CIPSTA_DEF:ip:"192.168.1.1" < CR > < LF >	Used network information in
+CIPSTA_DEF:gateway:"192.168.1.1" < CR > < LF >	Station mode
+CIPSTA_DEF:netmask:"255.255.255.0" < CR > < LF >	
+CIPAP_CUR:ip:"192.168.36.1" < CR > < LF >	Used network information in
+CIPAP_CUR:gateway:"192.168.36.1" < CR > < LF >	SoftAP mode
+CIPAP_CUR:netmask:"255.255.255.0" < CR > < LF >	
+CIPSTAMAC_DEF:"00:08:dc:a1:b2:33" < CR > < LF >	Setting MAC address in Station
	mode
+CWDHCPS_CUR:120,"192.168.36.2","192.168.36.101" < CR > < LF >	Setting IP allocation area as
	DHCP server
+CWSAP_CUR:"WizFi360","",11,0,0,0 < CR > < LF >	Setting SSID, PW, etc in SoftAP
	mode
+CIPMODE:0 < CR > < LF >	AT command mode in data
	transparent mode
+CIFSR:APIP,"192.168.36.1" < CR > < LF >	Setting IP/MAC address in
+CIFSR:APMAC,"02:08:dc:a1:b2:33" < CR > < LF >	SoftAP mode
